

Marketing & Design Services

Website Development & Support

CSCI's application development competencies extend to its website development and support area. For many years, CSCI's application development team has also been involved in developing and supporting interactive, standards compliant websites.

The team has not only developed CSCI's website, but has also developed websites with other Department of Defense and commercial entities including but not limited to; Office of Naval Research, Single Integrated Air Picture (SIAP) Joint Program Office, Greater Springfield Chamber of Commerce (GSCC), PEARL, and The SemperComm Foundation. The experience gained in developing and supporting client/server applications has given CSCI's web team a leg up in providing functional, stylish and interactive solutions to their clients through a website interface. CSCI takes web standards and new technologies a step forward by giving their clients a rich web experience to use for everyday business and project management, as well as an easy to use and change avenue to get the word out on the web. CSCI's web team can give you a customized website that is standards compliant, rich in interactivity with real and usable functionality to meet your needs.

It was a pleasure working with the Web site design and development teams at CSCI. They provided multiple options for look and helped my staff work through the process of functionality and how we would maintain the site. They used plain language during the set-up phase, and continue to do so anytime we call.

Nancy-Jo Manney,
Greater Springfield Chamber of Commerce

6225 Brandon Avenue, Suite 520
